

# Deliverables for Open Soft

January 27, 2015

Problem has been broadly divided into two parts:

- Server
- Client

## 1 Server

1. On receiving a GET request
2. On receiving a POST request

## 2 Client

1. Five basic features:

- (a) Search
- (b) Browse
- (c) Pin
- (d) Demand
- (e) Share

2. **Search:**

- (a) Enables the user to search through all the content present in the phone.
- (b) In case it's not found the user can *demand* that particular item.

3. **Browse:**

- (a) Enables the user to go through all the content present in the phone.
- (b) The content shall be categorised into news, occupational information and tutorial-videos.

**4. Pin:**

- (a) Enables the user to permanently save any content, which means that it won't be removed by any background process.
- (b) It can be removed if the user *unpins* it.

**5. Demand:**

- (a) Enables the user to demand for a content which is not currently present in his phone.
- (b) User can also see the status of all demands made in the past.

**6. Share:**

- (a) Enables the user to share a content present in his phone with his neighbours/friends using Bluetooth or WiFi.
